

Experience with bytewise by Fareeha Nadeem

I got this amazing opportunity to grow my front end skills with bytewise. I learned basic html, semantic html. I learned about css as well as to how to use it to beautify the website. I learned about grids , flex box and different positioning properties. I learned how to add youtube videos on our webpage. We then moved to bootstrap, where we used bootstrap frameworks inbuilt properties to create a website. It made making website so much easier. We then go through tailwind for parallax webpage effect. Lastly we learned about javascript and js react.
